

Maintenance interval after 10.000 operating hours

Our high-precision thermoforming machines - whether new or used - are always manufactured and assembled with excellent quality. To ensure that you can rely on your equipment for as long as possible, we recommend regular maintenance of your machine.

Depending on the condition and internal maintenance of your ILLIG machine, the first wear parts may be noticeable within a range of approx. 10.000 operating hours or unexpected system shutdowns may occur.

In order to ensure consistently high and smooth productivity and impeccable condition of your machine, we recommend our ILLIG maintenance service.

Our ILLIG technicians are absolute specialists when it comes to checking and analyzing your ILLIG machine. Within a short period of time you can find out on site where the replacement of worn parts or optimizations are necessary. Furthermore your machine will have the latest technical upgrades and operate at the highest level of efficiency.

Your benefits

- | Assured productivity
- | Your machine is always in excellent condition
- | Reduced downtimes
- | Learn about optimizations and possible upgrades
- | ILLIG know-how in-house

Available for machines
