

Modified tool installation bridge

We offer a modified tool installation bridge in which the weight of the mounting frames are reduced significantly. As a result, the installation of the upper tool is easier and thus a safe and healthy handling is ensured. This complies with the guidelines and safety requirements (DIN EN 12409) for load weights on thermoforming machines.

Your benefits

- | Significantly reduced weight of the mounting frame
- | Easy and safe handling
- | Health-friendly installation of the tool
- | Complies with load weight guidelines

Available for machines
