

Exchange forming device for your RDM machines

Our high-precision thermoforming machines - whether new or used - are always manufactured and assembled with excellent quality. To ensure that you can rely on your equipment for as long as possible, we recommend to replace the forming device after approximately 60.000 operating hours. Depending on the condition of your ILLIG machine a replacement of the forming device will ensure consistently high and smooth productivity of your machine.

Compared to the exchange of all the wear parts, the exchange of a forming device will lead to a shorter downtime of the machine and includes also ILLIG parts which are not defined as wear parts.

Our ILLIG technicians are absolute experts when it comes to checking, analyzing and repairing your ILLIG machine.

Your benefits

- | Assured productivity
- | State of the art parts & components
- | Reduced downtimes
- | Original ILLIG parts
- | Extension of machine life time
- | Extension of tool life time

Available for machines
