

ILLIG Health Check

The ILLIG Health Check is a machine inspection which is used in the context of preventive maintenance. Experienced ILLIG engineers check and evaluate the machine condition according to a defined machine checklist. After each Health Check ILLIG provides a report which includes an action plan, recommended spare parts and adjustments.

ILLIG Health Check allows you to keep the machine productivity and availability at a constant high level if you follow the recommended action plan.

Your benefits

- | Reducing of unplanned downtime
- | Constant productivity and availability of machine
- | Recommendation of actions to solve causes in order to check, adjust, replace wear and / or spare parts
- | ILLIG Service recommends suitable spare parts packages based on field experience combined with ILLIG engineers' experience
- | Following ILLIG recommendations can result in extension of machine life time
