

## ILLIG diagnosis report

The ILLIG diagnosis report is used in the context of preventive maintenance and repair. At each session, all the drives, e.g. main drive, pre-stretcher, material transport, tool cooling, etc. are monitored and documented in a curve diagram.

The recorded diagram is analyzed by the ILLIG service and compared with set points. After each session, the customer receives the diagnosis report in which any deviation from the standard is noted. Among other things, we also recommend solutions and actions to correct the cause.

### Your benefits

- | Lowering of unplanned downtime
- | The machine does not have to be stopped for the diagnosis report session
- | Recommendation of actions to solve causes such as check, adjust, replace wear and/or spare parts
- | ILLIG Service recommends suitable spare parts packages based on experience

### Available for machines

All machine types with S7 + MLC control and newer and ILLIG NetService installed
