

Retrofit of a PHF 80/3

The PHF 80/3 „Product-Handling-Flexible“ is a new development in the field of the packaging industry. It is a universally applicable molding stack handling system for the formation of long stacking rods as well as for packing the stacking rods. In this case, the individual short stacks, which are supplied from the molding machine, can be joined together by means of automation to form a predefined molding rod.

After that, the molded rods can be packed in the appropriate bags. Depending on the customer's request, the number of molded bars may vary in one bag. Thanks to the ergonomically placed removal belt, the corresponding bags can be easily removed.

Your benefits

- | Increased thermoforming line production
- | Easy stacking and packaging
- | Individual adaptation applicable
- | Improved ergonomic work environment

Available for machines

RDK 80 | RDK 80k | RDKP 72g | RDKP 72k | RDK 54k
