

## Cooling water control unit

This retrofit kit allows you an independent cooling water temperature regulation. The active cooling circuit prevents the condensation water on the machine and the excessive cooling down of the bridge (steel rule punch press).

The temperature remains constant even after production breaks (e.g. reel changing).

### Your benefits

- | Prevents the condensation water on the machine
- | Temperature remains constant even after production breaks
- | Prevents problems with height adjustment of steel rule punch press

### Available for machines
